

Ferb: With a notable addition of a large second helping of dessert. They appear to be coming out of the walls. Curiouser and curiouser. Ahem! Perhaps it's time we took a dive. I've heard of pumping iron, but pumping soda seems far more extreme. In the southern hemisphere, the gelatin would rotate counter-clockwise down a drain. Also counter-clockwise. I think that's the last of them. I don't really see how balloons are the ideal construction material. Those porcupines don't appear too friendly. A new enemy appears. Yet still fun. Rain, rain, go away. Actually, they shouldn't be able to borrow a balloon. Off into the wild blue yonder. It certainly is. It should be quite nostalgic. It appears we have unwelcome guests. Missed it by that much. Conveniently, the energy we need is also inside. Technically the gnomes formed an oligarchy. On any other day, I would consider a giant cube of fur "odd," but seeing as we've escaped from the goozim already, I would label this as commonplace. Perhaps even hackneyed. Absolutely smashing. That was too close. Another day, another goozim. Quite the loudmouth. I'm sure he is. Villains always come back in the sequel. The last train to nowhere.

Resistance Ferb: What if we could just walk in? I shall try to be worthy of my post!

Ferb: The episode may have been badly written. Well, that was predictable. They say we're all our own worst enemies. Haywire is neither hay nor wire. Discuss. Queen Elizabeth reigned over England for 44 years. She is not about to be undone by the likes of you. Parallel minds think alike. It's the end of an Elizabethan era. This is likely one of our simpler inventions. Speedy delivery indeed. It appears we need another delivery. Let the crane games begin. Although I could drive this, I don't believe it has the proper safety restraint systems for what we have in mind. Brother, I've got your back. Exit, stage left. Ah hah! Eureka. A true collector's item. Surprise! Okay, now that's just ridiculous. I wouldn't want to be in his shoes. Or thrusters.
